Nick Jackson Co. Inc. Yacht Davit Systems

50' - 70' Yacht class

SILENT 4 FUNCTION ALL HYDRAULIC

Lift from 6' minimum retracted, anywhere in between, up to 9' maximum extended. Our 1600 LX design is the perfect "Reaching & Lifting" davit system that can easily move your tender with a short nose pick, medium, or long one, all with the touch of a remote button.

Advanced technologies, including non-corosive composite rollers, and Samson's "Amsteel Blue" composite rope come standard in this versitile & compact system.

- BOOM Rated for full 1600# lifting in the DOWN position retracted or extended. Many cranes ARE NOT. "0 to up 70 degrees, gives you a wide arc of variable use, and with the extendable stainless nose, your lifting reaches are very versitile.
- LIFT With our NEW "LINEAR" technology. An internal hydraulic cylinder expands or contracts 2 sets of composite rollers mounted at each end. Extending or retracting this cylinder by remote, either raises, or lowers your tender with Samson's "Amsteel Blue" Composite rope technology. AMSTEEL BLUE Composite rope is STRONGER than conventional stainless, & so light, it floats. This saves you corrosion, wear & tear, and eliminates "memory" of stainless over a drum winch.
- EXTEND Use at 6' minimum, in between, up to 9' of maximum reach. Our polished stainless nose extends with your load on from 0" to 36" as needed.
- ROTATE FULL CONTINUOUS 360 degrees.
